

## Reflectance targets

Metsälinkki provides 2 %, 9 %, 23 %, 46 % and 85 % reflectance targets. Targets are made of materials with near Lambertian reflectance properties and has been calibrated in laboratory. Calibration is carried out between 400 nm and 2400 nm. The calibration has been done for the surface material, and not for each individual target. Along the purchase, either raw calibration data or readily calculated reflectance values for needed wavelength areas are delivered.

Targets were produced earlier by MosaicMill Ltd. Starting from March 2022 the production is licensed for Metsälinkki Ltd.

### Price list 11.5.2022

Width, mm	Height, mm	Reflectivity, %	Price, 1 piece, €
250	250	2/9/23/46/85	350
500	500	2/9/23/46/85	505
1000	1000	2/9/23/46/85	850

+ DHL transportation costs, depending on weight and size of the delivery.
